

FINDINGLIFE TECH REQUIREMENTS

-Projector and Big Screen

-Loud Speakers and sound system

(Small computer speakers are not sufficient. The presentation is all about a film, so the sound must be loud and clear)

-Mr. Saikaly will be using a MACBOOK, the computer must be within line of sight in front of the stage. A monitor next to the computer is ideal. All video/audio adapters will be supplied. (Video, S-video, DVI, VGA) The presentation runs off a pre programmed DVD which is operated by Elia.

-Wireless laveliere microphone, if one is not available then a wireless hand held mic will suffice. It is important not to use a mic with a cable as it is limiting with respect to the props.

- 8-18ft ladder that can be mounted horizontally, one foot off the ground.

-2 long desks to be set up next to the projector for climbing equipment

-With respect to lighting: A dimly lit room is best to accentuate the visuals on the screen with spot lighting on stage

-Elia will arrive one hour early for the technical set up.

-Please have a technician on hand to assist and please make the room available one hour in advance.

Any other questions, please do not hesitate to ask.

****Videotaping or recording devices are not permitted during the presentation****
